Oxygen microcirculation in microvascular tissue plays an important role in a variety of physiological and pathophysiological processes. To gain insight into the microcirculation, there is a need for real-time monitoring of the microcirculation in various tissues in vivo. In this study, a local intracavity U-cell image analysis (LIUA) system was developed for visualization of microcirculation in live animals. The LIUA system integrates an inverted microscope, an objective lens, a sensor, a camera, a computer, and a microvessel injection system. Using the system, microcirculatory oxygen tension in living rats was visualized and the microcirculation in the local tissue was studied. The normalized oxygen tension in microvascular tissue from various organs was measured by the LIUA system. The results show that the LIUA system can be used for recording real-time changes in microcirculation and oxygen tension in the living animals. This work demonstrates the potential application of the LIUA system for detecting and quantifying microcirculation in microvascular tissue in live animals. Q: Set Excel table format for specific range I am using the Visual Basic code below to create a formatted table of data that I have pasted into an Excel sheet. The data is pasted into the third column. I can then format it how I like. In the code below I want the data in column B to be formatted to appear as links and the data in column A to be formatted as bold and underlined and to appear inside the table. My result currently looks like: What I want: How can I alter my code to achieve this? Sub FormatTable() Dim ws As Worksheet Dim wb As Workbook
