As a visualization tool, AutoCAD LT is primarily used for 2D vector graphics, 3D drawings and architecture. Its print output is described by the DGN standard. Implementation AutoCAD LT uses the DXF (Drawing Exchange Format) as its native drawing file format. DXF was developed by Rockwell and is commonly

used for CAD and GIS products. In DXF, blocks are nested, meaning that a line or polyline that was drawn at the top level may be contained within a block at the lower level. The C++ programming language is used to create add-ons, for software tools, third-party plug-ins, and commercial applications. In addition to C++, AutoCAD supports the Visual LISP scripting language. Visual LISP is a dialect of the LISP programming language, but with a visual syntax that resembles a scripting language. AutoLISP, the LISP dialect, was first released in AutoCAD 1980 and is still in production today. AutoLISP is cross-platform, and it is available for most major programming platforms. The Visual Basic and C# programming languages are supported as scripting languages for AutoCAD and other Autodesk applications. AutoCAD provides the ability to run Visual LISP scripts and scripts in other scripting languages from within

AutoCAD. It can also run Windows API and .NET-based applications and ActiveX controls. Microsoft Direct Access to the DXF format was introduced in AutoCAD 2000. AutoCAD LT has several features that are not available in other AutoCAD versions. The points and curve tool in AutoCAD LT can create lines and splines that continue after the edge of a polygon. The command line interface in AutoCAD LT offers a scripting language called VBScript that can be used to automate any of the applications functions. The command line editor in AutoCAD LT offers tab completion for commands and filenames.

Features The following list is a sampling of the features that are included in AutoCAD LT.
