I have a model class called Booking and in that Booking model I want to use a file-based db, where I want to write a sqlite3 database. I want that for each Booking model to have its own file or directory. so it should be something like this:

/home/{user}/... Where user may be root or any other user. I want to use something like

```
this: import os class Booking:
os.makedirs(os.path.join('/home',
os.environ['user'])) .... or like this: import os
import os.path class Booking: book_dir =
'/home/{user}/' .... def __init__(self, id,...):
self.id = id self..... def save(self): filename
```

= '/tmp/booking{ }_'.format(self.id) with
open(os.path.join(self.book_dir, filename),
'wb') as f: f.write(self.data) return filename
.... But 3e33713323
