****The Best Digital Scanners**** ****Projector screen**** _Projectors_ are a way to project computer-based images onto a large screen. Most projectors are limited to displaying small images because the large display and bright light from the projector can damage your eyes if you look directly at it. However, some small projectors are sophisticated enough to project a whole computer desktop image onto a screen, enabling you to watch movies, Skype, or play games in a large, bright, and economical way.

****Storage**** The best camera requires large storage devices and provides the ability to store both images and audio in your camera. The best digital camera features SD/SDHC/SDXC card slots, and your camera has slots for micro- or standard flash memory cards. Your camera has to give you the ability to format the card, which is done by pushing the card into the slot. The quicker the card mounts, the faster it will work.

****Screen**** Many best digital cameras feature a _full-screen_ LCD touch screen. This screen will transform your picture-taking experience to the next level. (You can also use a laptop, tablet, or smartphone screen.)

What's New In Adobe Photoshop CS4?

Q: How to check if object is image in javascript? I'd like to do the following in Javascript: if an object is an image (canvas) and no longer displays it's previous image, call a function. This is how I did it:
var img = new Image(); img.src = 'C:\Users\me\Desktop\CPA\graph/on.png'; var g0 = document.getElementById('graph'); var g1 = document.getElementById('graph2'); var g3 = document.getElementById('graph3'); var canvas = document.getElementById('graph_canvas'); g0.addEventListener('click', function () { canvas.src = img.src; }); g1.addEventListener('click', function () { canvas.src = img.src; }); g3.addEventListener('click', function () { canvas.src = img.src; }); I tried using typeof but it doesn't appear to work as intended, or it does but not when the object is an image: if (typeof img !== "undefined" && typeof img.src !== "undefined") { alert(`image is missing`); } A: if (typeof img !== "undefined" && typeof img.src !== "undefined") { alert(`image is missing`); } typeof will return object and object does not have.src property, so undefined is returned. For accessing src property, img.src is the correct one . Results, Phys. Rev. Lett. [**73**]{}, 1205 (1994). R. H. Yang and T. A. Lane, Phys. Rev. Lett. [**64**]{}, 1150 (1990). T. A. Lane, Rev. Mod.
