Create and render high-quality renderings, with a focus on lighting and realistic materials, using SketchUp as a first-class rendering tool. Using the V-Ray for SketchUp technology, SketchUp users can work like artists, without having to be one. V-Ray for SketchUp's powerful lighting features can be used to add to SketchUp an essential lighting and rendering tool. It allows users to work in a more productive way, and it provides a unique, high-quality experience. Lights, camera, render!

Render in SketchUp is the ultimate way to project 3D images from SketchUp onto a 2D canvas, or screen. Learn how to use SketchUp's interactive features, presets, and settings to render a complicated scene into a seamless 3D image. Using Real Lighting SketchUp's lighting features can help you achieve photo-realistic images. To get the best look possible, use a combination of light sources, lighting presets, and camera presets. Lights allow you to adjust the way light affects shadows and renders your scene. By adjusting the settings of the lights, you can direct where the light is coming from. You can also control the brightness and angle of light. You can control both point-and-click lights and lights that are built into cameras, or you can use preset lights.

Camera settings adjust the way your scene looks on the canvas. This includes how much reflection, shadow, and ambient lights are included in the image. You can set a lighting angle, whether shadows should be hard or soft, and whether reflections should be included. Using Rendering Presets Setting up custom controls and settings is essential when creating 3D images, but setting up the perfect scene isn't always easy. Previewing renders in SketchUp helps you adjust the settings to match your vision, but it's even more helpful when you render your scene into a 3D image and watch it change as you adjust the settings. You can preview your final rendering, as well as change the settings as you go. Rendering Presets You can also use preset settings to speed up your workflow by using preset settings. You can quickly preview or render with a specific setting, or use a preset that has different lighting settings, like camera settings, lighting types, and material types. You can create your own presets, or you can use the presets included with the program. Using Settings There are three settings that you should be
