The Editor Preferences control the settings for all of the file's layers, which enables you to set the overall output or appearance settings. If you don't want to change them, just click OK to accept the file settings. You may notice that several settings have already been set for you. For instance, if you import your image directly into Photoshop, it has already imported the settings for your Import Settings section, such as the color mode, resolution, and resolution. You may want to customize the default settings in the Editor Preferences control to match your needs. You can also select a preset (previously saved) option in the Editor Preferences control to save the time of waiting for the settings to be automatically applied. You may want to create a new preset to save your current settings for future use. 4. Click OK to open the Open dialog box, and navigate to the image. When you have Photoshop open, you can access any of the Edit menu commands, as shown in Table 13-1, by pressing the F key on your keyboard. 5. Press the F key to bring up the Edit context menu. I want to know how to reverse the boot order in GRUB2. Right now, when I turn on my computer, Windows boots first, and then GRUB2 loads Ubuntu. I want it to be the other way around: Ubuntu boots first, then GRUB2 loads Windows. A: In the GRUB screen at boot, you can press 'e' to edit the boot command line. You could just add a couple of parameters, such as'single', to boot into the second OS (assuming the first OS installed with grub): boot (hd0,3)/ubuntu/grubx64.efi single Would result in the following: Ubuntu (hd0,3) / grubx64.efi Windows (hd0,1) Pressing escape would take you to the usual command prompt. If you want to use the boot loader to boot the first OS, but to change the GRUB2 boot order, you can do that with the following. Add the following in the command line: chainloader (hd0,2) To put it all together, here's what you do: Turn off the computer During system boot, press Esc to get into the GRUB screen Make sure you only have Windows on the list in the GRUB screen, make sure you have the corresponding startup partition/drive selected (hd0,2), and make sure there are no other entries in the GRUB list Add the above command line to the list in the GRUB screen, and press 'e' to enter a

Q: Why didn't Dany rip off the NARVIK crown? In Game of Thrones season 1 we are told that the NARVIK crown is made of Valyrian steel. So why did Dany who is a pureblood Valyrian rip off the crown and wear it on her head? (I presume she didn't want to take it off.) A: Not only because of Valyrian steel There are a few reasons for this, at least two of which are: The crown is expensive to repair. It's described as being a Valyrian steel construction, and black dragons will rip it apart. The Iron Throne is meant to be an Iron Throne - a high-ranking seat of power meant to reflect the elevated status of the wearer. (On the other hand, Dany didn't think the Targaryens were too important - the Iron Throne ended up in the fires of the godswood, as well as being attacked by Stannis Baratheon.) Dany is actually less Valyrian than the standard Targaryen line. As the story goes, her mother would sit her on the dragon's knee and teach her Valyrian, which went to the crown, which thus isn't the same armor-like armor the Targaryens wear.
